

INTRODUCING  
**ARIZOR**  
INVERTER AC STABILIZER

---

**THE  
BETTER HALF  
OF YOUR AC**

V-Guard's ARIZOR 4150 is a state of the art 1.5 ton inverter AC stabilizer that provides excellent protection to your air-conditioner. Distinguished by a shape that complements your AC, its stunning textures perfectly complements the feel of the room as well as the connected equipment, making it your AC's better half.

The stabilizer is equipped with a host of excellent technical features like smart voltage correction, micro-controlled operation, a digital display system etc., to ensure that the functioning of your air-conditioner is smooth and its delivery is seamless. Additionally, the stabilizer's basic build, down to its core, is robust and secure, complete with an ABS cabinet and a capacity of 12 Ampere.

### ITDS (Intelligent time delay system)

Equipped with an efficient Intelligent Time Delay System (ITDS), this AC stabilizer allows the compressor adequate balancing time in periods of power failure. This smart technology ensures that there are no delays in restarting when the stabilizer is in off-mode for three or more minutes. At the same time, it guarantees that, in case power supply fails and comes back within three minutes, a time delay is automatically activated.

### Digital Display System

ARIZOR 4150 is further strengthened by the inclusion of a unique and efficient digital display system. You will be able to see essential details like input voltage, output voltage, and protection modes that are enabled, such as low voltage, high voltage, overload cut-off, etc. very easily. The details are displayed in such a manner that you can constantly ensure that the connected load is working in the safe voltage range displayed on the stabilizer.

### Microcontrolled operation

Given the fact that even a small voltage fluctuation can damage sensitive components of your connected air conditioner, a microcontroller-based design is more than necessary. The highly efficient microcontrolled operating system facilitated by ARIZOR 4150 ensures that the mechanism of voltage correction operates at a speed that is much faster than what conventional circuits can offer.

### Smart Output Voltage Correction

The security of the ARIZOR 4150 stabilizer is further heightened with the addition of the advanced technology of its Smart Output Voltage Correction. This technology can adjust the regulation range to work in accordance with the supply voltage variation to gain the most satisfactory power regulation required for the safe functioning of the connected load.

### Elegantly Designed Cabinet

Easily the most distinguishable characteristic of this stabilizer is its remarkable look - a classy and flawless finish that serves as a perfect complement to your air-conditioner; an excellent addition to your living space. In short, the stabilizer's elegantly designed cabinet enhances your AC's beauty, giving it a seamless overall look of sophistication. ARIZOR 4150 is your air-conditioner's better half - one that is not just rich in features, but aesthetically stunning across every aspect of its path-breaking design.

Model	Capacity	Working Range (Input)	Cabinet Material	Application	Warranty	Time Delay
ARIZOR 4150	12 Ampere	150 VAC - 280 VAC	ABS	One Inverter AC Up to 1.5 Ton or 18000 BTU/Hour	3 Year	3 Minutes ± 20 Seconds ITDS
